

Supply Chain Risk - Identify, Measure, Manage

Wednesday 23rd May, at Cranfield School of Management, Milton Keynes

£99 + VAT

Most companies design and organise their supply chain from a viewpoint of optimal performance in “normal operational conditions”, i.e. in an (ideal) world without any disturbance. This is remarkable in view of recent studies showing that “... 73 % of global industrial companies suffered from a major supply chain disruption in the last 5 years, this is: with a considerable effect on their EBITDA and/or share value”.

A collaborative research program between The Vlerick Management School and MÖBIUS has established a methodology which addresses the key issues of managing Supply Chain Risk in the real world.

The seminar will cover:

- Identification of the risks which can impact on today's supply chains;
- A proven methodology to quantify the potential financial impact of Supply Chain Risks;
- How to define risk-mitigating strategies and their cost benefits.

Programme:

- > 09.00 – 09.30 Arrival & Registration
- > 09.30 – 11.30 Presentation & Discussion
- > 11.30 – 12.00 Finish & Refreshments
